Education

B.S applied computer science

Thomas more

2023 - Ongoing

Languages

- Dutch - A1
- German - A2
- English - bilingual
- Urdu - native

Design

- Figma
- Prototyping
- Design systems

About Me

I'm a builder who likes turning ideas into software people actually enjoy using. I started in design, moved into product management, and now write the code too, from Laravel back ends to computer vision and AI agents.

Work Experience

UI/UX Freelance | 2019 - Present

5+ years of experience

100+ projects

Full-Stack Development

Training Session Platform, university platform (team of 6)
TALL stack (Tailwind, Alpine.js, Laravel, Livewire), PHP, SQL, Jira

- Built a multi-role platform for students, coaches, coordinators and admins, each with its own dashboard and permissions.
- Implemented role-based access control with Laravel middleware, automatic role assignment from the user's email format, and email verification on registration.
- Developed assignment tracking and progress visualization with secure data flow between roles.
- Worked in Scrum sprints with Jira for planning and issue tracking.

Web App Green Eats

TALL stack, PHP, SQL, email notifications

- Designed and built separate user and admin panels with role-based layouts.
- Admins can manage orders, add products and manage registered users. Customers get sign-up, sign-in and password recovery by email.
- Implemented full CRUD with real-time filtering and search.
- Handled the database, business logic, UI and user flow end to end.

Technical

- Frontend: HTML, CSS, JavaScript
- Backend: Laravel (PHP), Python (API Integration)
- Data: SQL & Database Management
- Software Modeling & Design
- Deep Learning / AI

Soft skills

- Coordinated closely with development team of 4
- Streamlined team workflows
- Promoted to Product Manager

Additional Expertise

- Branding & Visual Identity
- Agile Methodology & Cross-functional Collaboration
- Usability Testing & User Research

Licenses & certifications

Foundations of User Experience (UX) Design

Designing a Low Fidelity Prototype in Figma

Volunteer Experience

ESN Team Member

Thomas More Buddy

AI, Computer Vision

Football Video Analysis: Player & Ball Tracking on a Tactical Map

- Built a computer vision pipeline that detects and tracks every player and the ball in match footage and projects their positions onto a top-down 2D pitch map in real time.
- Trained / fine-tuned a [YOLOv8] object detection model to detect players, goalkeepers, referees and the ball.
- Applied a multi-object tracker to keep a consistent ID per player across frames, including through occlusions.
- Used pitch keypoint detection + homography transformation to convert pixel coordinates into real pitch coordinates for the tactical view.

Multi-Agent AI Learning Assistant

Python, CrewAI, Qdrant, Redis, Streamlit, MCP

- Built a multi-agent system in which specialized agents collaborate: a Router directs each request, a Teacher explains concepts, an MCQ pipeline (Draft, Review, Improve) generates quiz questions, and a Grader evaluates the answers.
- Used Qdrant as a vector database for retrieval and Redis for caching / session memory.
- Integrated external tools through the Model Context Protocol (MCP) and built a Streamlit interface.

Software Modeling & Design

- Analyzed requirements and modeled the system with use case diagrams covering 4 actors and around 24 use cases.
- Designed class diagrams with around 18 classes, showing attributes, methods, associations, inheritance and multiplicities.
- Wrote use case descriptions, documenting requirements, scope and business rules.

Data Warehousing & Analytics

Star schema, Qlik Sense load scripts, SQL

- Designed star schemas for Olympic Games data (1896 to 2024), DAF axle factory operations and traffic accidents in Flanders, with defined fact table grain and conformed dimensions.
- Cleaned and transformed raw data in load scripts, resolving duplicates, orphan rows, encoding errors and grain mismatches.
